15. REGULATORY INFORMATION

15.2 Chemical safety assessment

Chemical Safety Assessment has been carried out for the substance. See Exposure scenario attached.

Contributing scenarios	Risk Management Measures
PROC 1, 2, 3	Handle substance within a closed system. No other specific measures identified.
PROC 4, 5, 6, 8a, 8b, 9, 10, 13, 14, 22, 23, 24	Wear suitable gloves (tested to EN374). No other specific measures identified
PROC 7,11	Covers percentage substance in the product up to 25%. Provide enhanced general ventilation by mechanical means. Wear suitable gloves (tested to EN374) and eye protection or wear a respirator conforming to EN140 with Type A/P2 filter. Avoid carrying out operation for more than 1 hour. Wear suitable gloves (tested to EN374) and eye protection.
Section 2.2	**Control of environmental exposure** Not required, as soluble silicates, inclu ding sodium/potassium silicate/disodium metasilicate, do not meet the criteria for classification as dangerous to the environment (See Article 14.4 of REACH Regulation). Furthermore, as high production volume substances, soluble silicates have been reviewed to a great extent for their exposure potential to the environment and the possible risks arising from their release (Van Dokkum et al. 2002.OECD SIDS 2004, HERA 2005, and CEES 2008). It was concluded that soluble silicates are currently of low priority for further work because of their low hazard profile.
Section 3	**Exposure Estimation**
3.1.	Health The ECETOC TRA tool has been used to estimate worker exposures
Section 4	**Guidance to check compliance with the Exposure Scenario**
4.1.	Health Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels.
